1. THE TILTED HOUSE: It slopes from the street to the back, reaching its escape position. This gives in the interior a theatre like setting of rooms, combining intimacy with overview.

2. THE BENT HOUSE: By bending the house in two directions, both the bedrooms and the living room are above water level. It creates an internal valley of platforms with rooms.

3. THE HOUSE ON THE RAMP: By positioning the house on top of a wall with a handicap ramp on top, the whole house is above potential water level. It gives a balancing impression.

4. THE HOUSE ON THE LIFT: By positioning the house as high as possible on top of a lift with a stair, the whole house is above potential water level. It has a great view over the surroundings. It becomes one of the markstones of the operation.

5. THE FLOATING HOUSE: This house is inspired by Thom Mayne's proposal and Dutch housing developments. By positioning the house on top of a cushion of styrofoam, the house can float in case of floods. It gives the houses a distinct white socle.
